

DANG NGUYEN

PROCESS ENGINEER

Process Optimization | Manufacturing Digitalization | Database Development | Excel VBA

PROFILE

• Results-driven Process Engineer with 8 years of experience in continuous dyeing manufacturing. Skilled in process optimization, color matching, root cause analysis, quality improvement, and production support. Experienced in **Excel VBA, database development, and manufacturing digitalization** to improve efficiency and reduce manual operations.. Strong analytical mindset with a focus on continuous improvement.

WORK EXPERIENCE

Process Engineer

Best Pacific Vietnam Co., Ltd. | 2017 – Present

- Optimized continuous dyeing processes to improve productivity, product quality, and manufacturing efficiency.
- Controlled process parameters and dye formulations to ensure consistent color accuracy and process stability.
- Performed root cause analysis (RCA) and implemented corrective actions to resolve production issues and prevent recurrence.
- Led process improvement initiatives using production data, technical analysis, and continuous improvement methodologies.
- Developed Excel VBA automation tools to streamline reporting, reduce manual work, and improve operational efficiency.
- Designed, developed, and maintained production management databases using Microsoft Access to support manufacturing operations and data traceability.
- Built and optimized production management workflows, enabling synchronized production data and standardized operational processes.
- Collaborated with production, quality, maintenance, and planning teams to improve manufacturing performance and process reliability.
- Supported process standardization, documentation, operator training, and continuous improvement activities.

ACHIEVEMENTS

- Increased production process automation from 16% to 67% by digitalizing manufacturing data and developing an integrated production database.
- Eliminated manual data entry by implementing database integration and QR code-based data collection, achieving 100% data entry accuracy while significantly reducing operator workload.
- Designed and implemented a production management system using Excel VBA and Microsoft Access, enabling real-time data synchronization, automated reporting, and full production traceability.
- Standardized production workflows and minimized manual operations to improve efficiency, data consistency, and process reliability.

EDUCATION

B.Eng. (Mining Engineering)

Hanoi University of Mining and Geology

Major: Mining Engineering

- Engineering principles and technical analysis
- Process planning and optimization
- Risk assessment and troubleshooting
- Data analysis and problem solving

Hai Phong , Vietnam

TECHNICAL SKILLS

PROCESS ENGINEERING

- Process Optimization
- Continuous Dyeing Process
- Root Cause Analysis (RCA)
- Color Matching & Dye Adjustment

DATA & AUTOMATION

- Advanced Excel
- Excel VBA Automation
- Microsoft Access Database
- Production Data Analysis

MANUFACTURING SYSTEMS

- Production Management System Design
- Database Design & Development
- Production Data Integration
- Workflow Digitalization

QUALITY

- Process Documentation
- Quality Improvement
- Continuous Improvement

LANGUAGES

- English - Intermediate
- Chinese - Good Working Proficiency
- Vietnamese - Native
